

AQUA CELL ERP v3.0

Enterprise Mobile Phone Inventory, Refurbishment & Sales Management Gateway

OFFICIAL WORKFLOW GUIDE

1. Executive Summary & Architecture Overview

AQUA CELL ERP is a specialized end-to-end refurbishment and wholesale mobile phone inventory management platform. It tracks devices from initial raw intake through multi-stage quality inspections, repair SLA timers with external refurb partners, ready-to-sell stock, commercial billing, and accounts payables.

2. The 6-Stage Refurbishment Workflow Engine

1 Stage 1: Raw Stock Intake

Units enter system via ⚡ Rapid IMEI Barcode Scanner or CSV import. Technicians perform 15-point Initial QC (Housing, Display, Battery, LCD, Face ID, Board, etc.).

2 Stage 2: Raw QC Done Stock

Devices with logged hardware faults ready to be assigned to Refurb Center repair batches.

3 Stage 3: Repair Batches & SLA

Devices grouped into physical manifest batches (e.g. BATCH-2026-0001) dispatched to refurb centers with real-time turnaround SLA timers.

4 Stage 4: After-Fix QC Desk

Repaired stock returning from refurb centers undergoes verification. Logs repair costs vs. raw unit costs or triggers in-house chargebacks.

5 Stage 5: Ready to Sell Stock

Fully tested & passed inventory available for wholesale sales invoicing (Cash / Credit terms with 7-day hardware warranty).

6 Stage 6: Master Check Desk

Security desk requiring Senior Admin passcode authorization for failed or special release devices.

3. Role-Based Access Control (RBAC) Permission Matrix

The system enforces strict multi-role permission boundaries to secure financial metrics and isolate refurb partner workstations.

ERP MODULE / FEATURE	 SUPER ADMIN	 SUPERVISOR	 REFURB CENTER
All Stock Inventory View	Full Access	Full Access	 Blocked
Executive Financial Dashboard	Full Access	Full Access	 Blocked
 Rapid Barcode IMEI Scan Intake	Full Access	Full Access	 Blocked
Repair Batches & SLA Turnaround Timers	All Batches	All Batches	 Assigned Batches Only

Wholesale Purchasing Cost (AED) & Margins	Visible	Visible	 100% Hidden
Commercial Client Invoicing & Ledger	Full Access	Full Access	 Blocked
Refurb Payables & Accounts Ledger	Full Access & Record Payment	View Only	 Blocked
Record Deletions (Devices, Invoices, Accounts)	 Allowed	 Blocked	 Blocked
Master Check Admin Passcode Authorization	 Full Override	 Passcode Required	 Blocked

4. Rapid Barcode / IMEI Scanner Intake Workflow

Operational High-Speed Intake Protocol

- 1. Click yellow  **Rapid IMEI Scan Intake** button on top header.
- 2. Set batch specifications: Model, Storage, Color, Cost (AED), and Initial Faults once per intake shipment.
- 3. Point USB or Bluetooth barcode scanner at phone box/housing IMEI barcode.
- 4. Scanner automatically transmits 15-digit IMEI + Enter signal, intaking unit into Stage 1 Raw Stock instantly.
- 5. Session table displays live count & scanned units log with instant duplicate prevention alerts.
